PREANESTHETIC SAFETY SCREENING

A physical examination will be performed on your pet before administering anesthesia. **Some pets have internal problems that produce complications, yet are not evident on physical examination.** These include anemia and lack of clotting, as well as liver, kidney, heart, or other organ conditions.

The following are included with the Spay, Neuter, or Declaw:

- 1.) Post Op Pain Injection which last 8-12 hours.
- 2.) Hospitalization
- 3.) Take home pain medication for 5 days. This helps provide an added source of comfort after surgical procedure.

****The above prices are included in the surgery quote that you were given****

The Following are optional but recommended services (Please Circle Yes or No):
